1 Hypothesis

Using more complicated non-linear models with rich feature set could improve the prediction accuracy of 1) energy consumption and 2) the change point when heating or cooling system switches on.

2 Broad idea

From the discussing with Professor Matt Gormley, the broad approach should be: first create a rich feature set with all potentially related features included, and use a non-linear model on the rich feature set so that the training data can be nearly perfectly predicted. Then applying some regularization to also drive down the test error. Finally try to interpret the model by evaluating the accuracy drop by leaving each feature out, or by incrementally adding a feature in random order and evaluate the accuracy gain by adding that feature.

3 Collect input variables and representation

A list of variables that might be important are

- Environmental variable
 - Temperature (measured, average, or categorical):
 - * outdoor air temperature
 - · as numerical: mean [3,6–8], degree-day [4,10,13], Radio Basis Function Kernel (RBFs) [15], exact [2,9,17]
 - · as categorical variables [16]
 - * indoor air temperature [7]
 - Humidity
 - * relative humidity (RH) [3]
 - * dew point temperature [2]
 - * exponential smoothing applied to humidity with time constant of 24h [1]
 - Solar:
 - * solar radiation (W/m^2) [3, 7]
 - * solar flux [9]

- * solar aperture (m^2) [7], different in different time of year
- * solar gains $(Q_S = SI, \text{unit: } W)$ [7]
- Wind
 - * speed [9]
 - * velocity [1]

Occupancy

- Number of occupants [16]
- Operation schedules [13]
- Occupancy ratio (ratio of occupied vs non-occupied days) [12]
- Industry type
- Building construction
 - Detached vs apartment, categorical [16]
 - Construction material: wooden vs non-wooden [16]
- Building Mechanical System data
 - BAS data
 - System type

• Time

- swing season (spring vs fall)
- day type (every-day, weekday, weedend) [6]
- hour of day ([6,15], [5] mean-week and day-time-temperature regression model)
- day of week ([5] mean-week, day-time-temperature, and LBNL regression model)
- time lag (k), the number of previous readings to include in the model [7]
- unit circle representation of time of day, week, month, and year [1]

• Energy

power (W, it's an auto-regressive component: use energy to predict energy) [7](
 [11] has some experiment about prediction of different time horizon using different time resolution)

- fuel type: Electric vs non-electric [16]
- Floor area [16]
- Building dynamics
 - Heat loss coefficient $(W/m^2K)\ [16]$
 - $-\,$ Equivalent leakage area (cm^2/m^2) [16]
- Retrofit type / time
 - pre-retrofit period [8]

4 Features

5 Data sources

5.1 Building metadata source

5.1.1 Building list

The buildings in the analysis are from the GSA portfolio. http://128.2.109.159:8080/

Figure 1: building locations

GSA/interval/mapped.html

The table Table 2 contains the names and location of the building in the study. More detailed descriptions of the buildings could be found in https://www.gsa.gov/portal/category/22227 under each region and facility, but seems only less than 10% of the building has such detailed information (e.g. JOHN W. MCCORMACK BUILDING), most of them is just a contact phone number.

5.1.6 Building Mechanical System

BAS data from sky spark.

To be downloaded...

5.2 Environment data sources

TODO: check NLDAS stage 2 forcing data so that all data are grid based In the previous stage of the work, the data source for temperature, the only environmental variable is retrieved from the pisystem, whose source is weather underground web interface.

5.2.1 Integrated Surface Global Hourly Data from NOAA

• data sample

Figure 5: NOAA Integrated Surface Global Hourly Data

• Station distribution

Figure 6: NOAA ISD station distribution

• download: ftp://ftp.ncdc.noaa.gov/pub/data/noaa/, or using NCEI CDO 1.0 Rest API example url: https://www7.ncdc.noaa.gov/wsregistration/CDOServices.html

% check for variables
https://www7.ncdc.noaa.gov/rest/services/variables/ish/?output=csv&token=cbacihgEFi
% query temperature

https://www7.ncdc.noaa.gov/rest/services/values/ish/72315003812/TMP/200101010000/20

- Data are ordered by year and station, each data file contains weather station identifier (USAF, and WBAN), table can be downloaded under ftp://ftp.ncdc.noaa.gov/pub/data/noaa/, file "isd-history.csv" (2.8MB version, there are a lot of different versions of the same file but different content)
- relevant fields: wind direction and speed, sky cover condition (clear, overcast, scattered, etc.), temperature, dew point, precipitation.
- time resolution: 1 to 2 observations per hour
- The list of weather stations associated of the buildings:

```
KNIP, KABQ, KOAK, KADS, KOKC, KAKR, KOLV, KALB, KOMA, KATL, KPDK, KAVL, KPDX, KBFM, KPHX, KBKF, KROC, KBKL, KSAC, KBOS, KSAN, KCID, KSFO, KCMH, KSLC, KCYS, KSSF, KDAL, KSTL, KDCA, KSTP, KDET, KSYR, KDSM, KVGT, KEYE, KFAR, KHKS, KHOU, KLIT, KLNK, KLUK, KMDW, KMIA, KMKC, KNEW
```

5.2.2 National Solar Radiation Data Base (NSRDB)

"The NSRDB is a serially complete collection of hourly and half-hourly values of the three most common measurements of solar radiationglobal horizontal, direct normal, and diffuse horizontal irradianceand meteorological data" https://nsrdb.nrel.gov/background. The old versions are station based, the new version is grid based $(4m \times 4m \text{ or } 0.038 \text{ degrees})$

Downloaded global horizontal (ghi), direct normal (dni), and diffuse horizontal irradiance (dni). Other meteorological data include wind speed, temperature, Solar Zenith Angle are also available (https://nsrdb.nrel.gov/current-version).

Table 7: Data Fields in NSRDB

var	type	unit	source	in NSRDB note

5.2.3 NLDAS

"The goal of the North American Land Data Assimilation System (NLDAS) is to construct quality-controlled, and spatially and temporally consistent, land-surface model (LSM) datasets from the best available observations and model output to support modeling activities." https://ldas.gsfc.nasa.gov/nldas/ It has 1/8th-degree grid resolution and dates back to 1979.

introduction ppt about the dataset: https://ldas.gsfc.nasa.gov/nldas/presentations/Cosgrove_GAPP_May2002.pdf

Download and data specs: https://disc.sci.gsfc.nasa.gov/uui/datasets?keywords= NLDAS download page: https://disc.sci.gsfc.nasa.gov/uui/datasets/NLDAS_FORB0125_

Figure 7: NLDAS data download

H_V002/summary?keywords=NLDAS

6 Non-linear models

- 6.1 Neuron Network with 1-2 hidden layer
- 6.2 Support Vector Regression with RBF kernel
- 6.3 Random forest regression [14]
- 6.4 piecewise linear regression as baseline (it's a simple non-linear model, but not expressive enough)
